

ELYSE MOCK

Munger Mountain Elementary School

4th and 5th grade students at Munger Mountain worked hard to create this beautiful 3D garden of roots. 4th graders focused on the elements of line and color while intricately constructing the roots and 5th graders focused on texture and contrast while creating their flowers. Students chose to create brightly colored roots as opposed to brightly colored flowers to highlight the fact that without roots there would be no existence. It was also discussed that often beauty can not always be seen and is often what lies beneath.
